

# A Dynamic Approach to Core Fixed Income Investing

## WRITTEN BY

THE LOOMIS SAYLES CORE  
FIXED INCOME TEAM

WITH INTEREST RATES LOW GLOBALLY, INTEREST IN  
CORE FIXED INCOME IS UNDERSTANDABLY TEPID.

But, we believe investment grade fixed income should  
always have a place in a diversified portfolio. The critical  
question is how to implement it.

AUGUST 2021

## KEY TAKEAWAYS

- Core fixed income investing may be necessary for a diversified portfolio, but it's not necessarily simple.
- Replicating the benchmark does not result in peer-leading returns.
- We believe tactical sector allocation through beta adjustments and strong security selection are necessary ingredients for excess return.
- Our dynamic, active approach has resulted in a strong long-term track record.

Core strategies need to do more than just manage tracking error to a benchmark, typically the Bloomberg Barclays Aggregate Bond Index. Replicating a benchmark can come with some undesired tradeoffs. As of 30 June 2021, the Bloomberg Barclays Aggregate Bond Index posted bottom-quartile returns in the core fixed income manager universe for the 1-, 3-, 5- and 10-year periods.<sup>1</sup> These returns highlight the shortcomings of an autopilot approach to core fixed income investing. Importantly, many active core strategies can and have generated attractive relative returns for investors over a market cycle.

## A Deceptively Complex Puzzle

The investment universe for core strategies is vast and comprised of US Treasuries, agencies, agency mortgages, investment grade corporate bonds, CMBS and ABS. The economic and fundamental drivers of these investment grade sectors are markedly different. Therefore, making impactful, well-timed use of these sectors can be a challenge, even for the savviest investor. As illustrated in the table on the next page, each sector of the universe uniquely contributes to a diversified portfolio. Within the Loomis Sayles Core Fixed Income strategy, we dynamically allocate among these sectors based on top-down views and populate them with our best bottom-up security ideas.

	SECTOR ATTRIBUTES	OUR VIEWS OF SECTOR ROLES AND IMPLEMENTATION
<b>US TREASURYS</b>	<ul style="list-style-type: none"> <li>• Guaranteed by the US Government</li> <li>• Large, liquid market</li> <li>• High quality</li> <li>• Wide range of maturities</li> </ul>	<ul style="list-style-type: none"> <li>• Provide portfolio liquidity</li> <li>• Manage duration</li> <li>• Protect portfolio in risk-off environments</li> </ul>
<b>INVESTMENT GRADE CORPORATE BONDS</b>	<ul style="list-style-type: none"> <li>• Connected to corporate health and profits</li> <li>• Typically offers yield advantage over Treasurys</li> <li>• Diversified across industries</li> <li>• Varying maturities</li> </ul>	<ul style="list-style-type: none"> <li>• Tend to favor when spreads are attractive relative to Treasurys</li> <li>• Compare different issues along the curve to find the best valuation</li> </ul>
<b>AGENCY MBS</b>	<ul style="list-style-type: none"> <li>• High-quality securities guaranteed by US agencies (FNMA, FHMC and GNMA)</li> <li>• Large, liquid market</li> <li>• Typically offers yield advantage over Treasurys</li> </ul>	<ul style="list-style-type: none"> <li>• Provides additional yield potential without significantly increasing credit risk</li> <li>• Identify securities mispriced by the market on option-adjusted spreads</li> <li>• Exploit supply/demand imbalances in the TBA market</li> <li>• Invest in agency-backed instruments outside the Barclays MBS Index</li> </ul>
<b>CMBS</b>	<ul style="list-style-type: none"> <li>• Secured by US commercial real estate</li> <li>• Corporate-like attributes but more seniority</li> <li>• Offers yield pick-up and collateral support</li> <li>• Helps improve portfolio diversification</li> <li>• Limited shareholder-friendly activity</li> </ul>	<ul style="list-style-type: none"> <li>• Identify opportunities from proprietary loan models and careful analysis of structural features</li> <li>• Focus on high-quality CMBS in both conduit and single-property deals</li> </ul>
<b>ABS</b>	<ul style="list-style-type: none"> <li>• Linked to US consumer debt</li> <li>• Tends to be shorter-duration and higher-quality</li> <li>• Liquid market</li> <li>• Offers spread over Treasurys</li> </ul>	<ul style="list-style-type: none"> <li>• Identify specific parts of the capital structure that offer attractive prices after considering tranche variability</li> <li>• Identify ABS issuers with experience managing risk factors</li> </ul>

*The table reflects the current opinions of the authors as of 31 March 2021. Views are subject to change at any time without notice. Other industry analysts and investment personnel may have different views and assumptions.*

Macro sector teams, composed of portfolio managers, traders and macro analysts, furnish top-down macroeconomic insights, which are important inputs into our portfolio allocation. Market sector teams leverage the firm’s credit cycle framework, a model that analyzes changing credit conditions over time, to forecast sector returns, comprehensively assess risks and provide relative value recommendations. Using our sector team views as a baseline, we develop sector allocations across the core fixed income universe. To size these allocations, we primarily consider contribution to beta, a measure of risk and return potential.

## Why Use Beta?

We believe beta is a more accurate way to measure our relative risk than simply relying on market value. Relative risk in beta terms may be different than market value weights because beta also incorporates duration, spread and historical volatility. In simplest terms, a beta greater than zero implies an overweight, while a beta of less than zero implies an underweight. Higher values also indicate greater relative risk exposure. For example, the two bonds in the table below are from the same industry, have identical portfolio market value weights and are represented in the benchmark. However, contribution to beta, both absolute and relative, differs materially due to unique duration and spread characteristics.

### CONTRIBUTION TO BETA EXAMPLE

	BOND A	BOND B	BENCHMARK
<b>SPREAD</b>	25 bps	150 bps	50 bps
<b>DURATION</b>	2 years	10 years	4 years
<b>DURATION TIMES SPREAD</b>	50	1,500	200
<b>BETA RELATIVE TO INDEX</b>	0.3	7.5	1.0
<b>MARKET VALUE WEIGHT</b>	<i>Portfolio Position</i> 0.75%	<i>Portfolio Position</i> 0.75%	<i>Benchmark Position</i> 0.50% each
<b>ABSOLUTE CONTRIBUTION TO BETA</b>	0.19%	5.63%	Bond A: 0.13% Bond B: 3.75%
<b>RELATIVE MARKET VALUE</b>	+0.25%	+0.25%	
<b>RELATIVE CONTRIBUTION TO BETA</b>	0.06%	1.88%

These scenarios have inherent limitations and rely on opinions, assumptions and mathematical models that can turn out to be incomplete or inaccurate. Past performance is no guarantee of future results.*

For us, contribution to beta is more than just a historical reflection of risk or volatility. It is a dynamic investment tool that we use to actively assess prospective relative risk at the security, sector and portfolio level. Our customized contribution-to-beta models guide us in determining optimal sector weights by considering valuations, spread levels and different market outcomes.

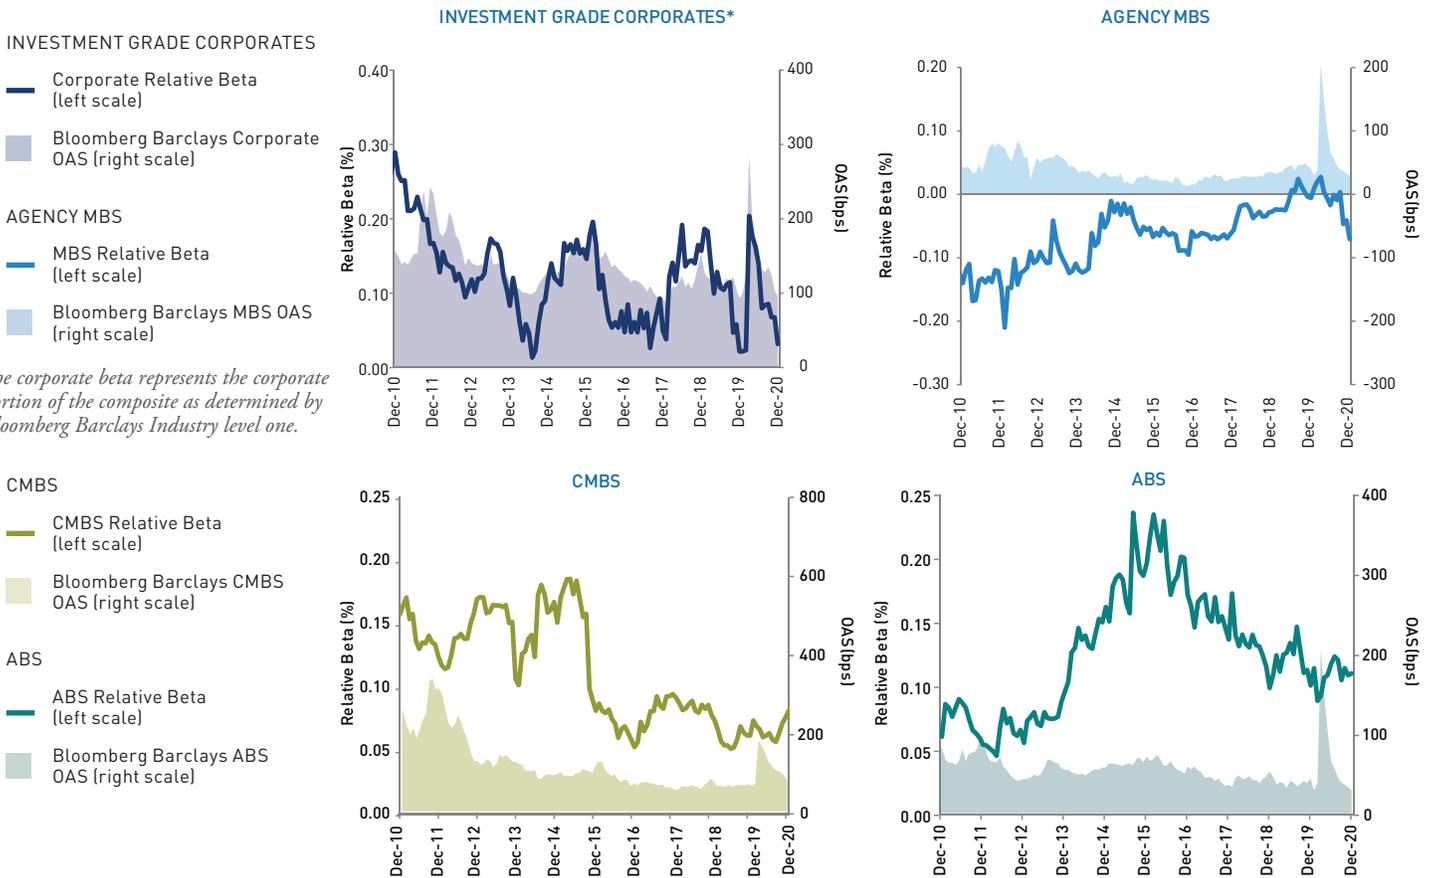

# Our Active Approach to Sector Allocation

We have dynamically shifted our beta exposures across sectors over time, as the charts below illustrate. Sector betas are actively managed and change as the relative attractiveness of each market evolves over time.

Our sector allocation process considers fundamental analysis and valuations relative to risk as well as the macroeconomic landscape. We leverage Loomis Sayles' deep research capabilities and proprietary tools to help us frame our understanding of risk and shape our views on valuations. If valuations appear robust and we believe we can be compensated for taking risk, we typically dial up our portfolio risk. In many cases, we use corporate bonds to do this as they generally contribute more risk than other asset classes used in the strategy. If we believe valuations are unattractive or we view the opportunity set as narrow, we typically reduce portfolio risk and migrate toward higher-quality sectors like agency MBS and Treasurys. These higher-quality allocations can act as "dry powder" to capitalize on market opportunities or add to portfolio risk. We believe this valuation-driven approach to sector allocation is a key aspect of our active approach.

## COMPOSITE SECTOR CONTRIBUTION TO BETA

Source: Loomis Sayles, from 31 December 2010-31 December 2020. Beta characteristics are shown as supplemental information for the most actively managed sectors typically utilized in this strategy. Beta measures the risk of each sector in the portfolio relative to the risk of that sector in the Bloomberg Barclays US Aggregate Index (recognized as an industry-wide representative index). A beta above zero means that the portfolio has greater risk in that sector than in the Bloomberg Barclays US Aggregate Index.

Indexes are unmanaged and do not incur fees. It is not possible to invest directly in an index.

## High-Conviction Security Selection

After determining sector allocation, we populate portfolios with our best ideas sourced from deep fundamental research. In partnership with Loomis Sayles' credit and securitized research analysts, we identify what we think are attractive securities and determine appropriate position sizes based on issuer contribution to beta, relative valuation and liquidity. Importantly, fixed income markets have become less liquid but more transparent; an evolution that we believe validates our focus on strong credit research as a key driver of security selection.

As has been widely reported, Wall Street banks' proprietary trading desk activity has declined due to new regulations while corporate issuance has continued at a robust clip. As a result, bond markets have become less liquid with higher levels of outstanding debt. For money managers like Loomis Sayles, this creates opportunities. We focus on leveraging our deep fundamental credit research to opportunistically identify and purchase fundamentally strong securities at better valuations, exploiting dislocations from lower liquidity.

At the same time, market information has increased with FINRA's Trade Reporting and Compliance Engine (TRACE). We are now able to analyze market data to assess what bonds are trading, how often and at what levels. Quantitative insight into market dynamics provides valuable information that informs portfolio construction and implementation.

Furthermore, we have continued to refine the quantitative tools that support our fundamental research. For example, our corporate relative value (CRV) model analyzes an issuer's curve to identify mispriced securities. When augmented by the depth of our credit research, we can initiate positions or swap into more favorably priced issues. Similarly, we track trends and nuances of prepayment patterns in securitized debt. We have built data warehouses to monitor prepayment speeds for different types of mortgage pools. Our securitized analysts also assess the fundamental asset and liability structures backing these bonds. We believe the depth and breadth of our credit and securitized research, combined with the recent evolution of fixed income markets, provides us a competitive advantage in security selection.

### OUR APPROACH TO AGENCY MBS

Agency MBS is known for market depth and liquidity. Historically, the sector has also offered higher yields versus Treasuries without significantly increasing credit risk. We look for agency MBS sectors that have a prepayment risk premium but exhibit lower prepayment patterns. The commercial mortgage-backed segment, for example, typically has very stringent prepayment penalties that make it onerous and costly for the underlying loans to refinance. Agency CMBS often offers a higher yield than single-family MBS. Higher return for less risk may seem contradictory, but we find it prevalent in many sub-sectors of the MBS market.

## Benefits of an Integrated Approach

Some investors fear a core fixed income allocation will relegate them to interest rate risk, macroeconomic headwinds and lackluster returns. If investors sit statically in an asset allocation, this may be the case. Active core fixed income investing requires more than assembling a portfolio from disaggregated pieces of the Bloomberg Barclays Aggregate Bond Index. We believe it requires an integrated approach driven by top-down sector insights and deep fundamental security research. As evidenced by our strong long-term track record below, our dynamic investment process of tactical sector allocation and strong security selection has been successful when measured against the benchmark and the vast majority of our peers.

Historically, our investment process has resulted in consistent risk-adjusted excess returns over the Bloomberg Barclays Aggregate Bond Index. Looking at the past 10 years of trailing 12-month performance, the core strategy has consistently outperformed the benchmark or the median manager. As shown in the charts below, we have also lowered the strategy's tracking error over time while still offering strong returns and information ratios.

**CORE FIXED INCOME COMPOSITE AS OF 30 JUNE 2021**  
Trailing Tracking Error, Returns & Information Ratio & Ranking vs. Index

Source: eASE Analytics System; eVestment Alliance is the ranking agency. Universe: eA US Core Fixed Income. Annualized performance is calculated as the geometric mean of the product's returns with respect to one year. Returns for multi-year periods are annualized. Gross returns are net of trading costs. Net returns are gross returns less effective management fees. Median is the middle value for the observations as of the end of each period shown. Although we believe it is reliable, we cannot guarantee the accuracy of data from a third party source.

## About Risk

*Investing involves risk, including risk of loss. Portfolios that invest in bonds can lose their value as interest rates rise, and an investor can lose principal. Investments in mortgage securities are subject to prepayment risk, which may limit the potential for gain during a declining interest rate environment and increase the potential for loss in a rising interest rate environment.*
