ASG Tactical U.S. Market Fund

Q1 • March 31, 2019

Fund Highlights

- Aggressive equity strategy that seeks to minimize the impact of extreme market drawdowns without limiting long-term growth potential
- Uses a proprietary risk model that compares near-term risk and return expectations to determine the appropriate level of equity market exposure
- May be suitable for investors seeking an equity allocation that can respond to changing market conditions

Average annualized total returns† (%)

Morningstar Rating

Long-Short Equity – Class Y

Overall rating derived from weighted average of the 3-, 5- and 10-year (if applicable) Morningstar Rating metrics; other ratings based on risk-adjusted returns

Overall out of 205 funds	★★★★★
Three years out of 205 funds	★★★★★
Five years of 122 funds	★★★★★

Fund Facts

Objective

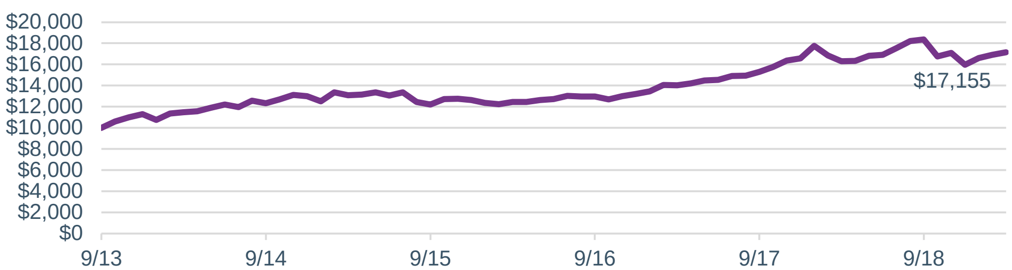
The Fund seeks long-term capital appreciation, with emphasis on the protection of capital during unfavorable market conditions

Share Class	Ticker	Cusip
Class Y	USMYX	63872T-39-8
Class A	USMAX	63872T-42-2
Class C	USMCX	63872T-41-4

Class A maximum sales charge of 5.75%
Class C maximum CDSC of 1.00%

Total net assets	$155.7 million
Inception date	9/30/2013
Number of holdings[2]	187
Turnover as of 12/31/2018	88%
Distribution frequency	Annual
Gross Expense Ratios (Y/A)[3]	1.20%/1.45%
Net Expense Ratios (Y/A)[3]	1.00%/1.25%

Investment return – Hypothetical growth of $10,000 investment[4]



Performance data shown represents past performance and is no guarantee of, and not necessarily indicative of, future results. Total return and value will vary, and you may have a gain or loss when shares are sold. Current performance may be lower or higher than quoted. For most recent month-end performance, visit im.natixis.com.

Performance for other share classes will be greater or less than shown based on differences in fees and sales charges. You may not invest directly in an index.

†Performance for periods less than one year is cumulative, not annualized. Returns reflect changes in share price and reinvestment of dividends and capital gains, if any.

1 The calendar year performance shown for 2013 is a partial year of performance since inception on 9/30/2013 through 12/31/2013. 2 The number of holdings presented includes futures, common stock, ETFs and money market securities, if applicable. 3 As of the most recent prospectus, the investment advisor has contractually agreed to waive fees and/or reimburse expenses (with certain exceptions) once the expense cap of the fund has been exceeded. This arrangement is set to expire on 04/30/2019. When an expense cap has not been exceeded, the gross and net expense ratios and/or yields may be the same. 4 This chart tracks the hypothetical growth of a $10,000 investment in Class Y shares. Investment returns would be lower for Class A share investments, which are subject to higher fees and may also include sales charges.

Not all share classes are available for purchase by all investors. Class Y shares are available to institutional investors with a minimum initial investment of $100,000 and through certain wrap-fee programs, retirement plans and investment advisory accounts with no minimum. See the prospectus for more details.

For each fund with at least a three-year history, Morningstar calculates a Morningstar Rating™ used to rank the fund against other funds in the same category. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly excess performance, without any adjustments for loads (frontend, deferred, or redemption fees), placing more emphasis on downward variations and rewarding consistent performance. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom10% receive 1 star (each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages). Past performance is no guarantee of future results. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2)may not be copied or distributed; and (3) is not warranted to be accurate, complete, or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

* The portfolio exposures presented above are intended to illustrate the asset class exposure present in the fund. As applicable, the portfolio exposure percentage will represent the notional contract value in U.S. dollars of the Fund's futures positions, forward positions and/or portfolio exposure to ETFs divided by the Fund's total net assets. Notional contract values represent the aggregate exposure that a futures or currency forward contract provides to the underlying reference asset or currency, respectively. Given the nature of the Fund's investments, the sum of the percentages above may not equal 100% and the notional contract values may not equal the net assets of the Fund.

On a daily basis the Fund reflects the changes in the unrealized gains and losses from these futures and/or forward currency contracts in the computation of its net asset value. At March 31, 2019, 36.30% of the Fund's net assets represented investments in money market securities, 62.69% in equities and 1.01% of the Fund's net assets represented other assets less liabilities. The other assets primarily consist of margin and unrealized gains and losses on futures contracts.

Risks

Leverage can increase market exposure and magnify investment risk. Equity securities are volatile and can decline significantly in response to broad market and economic conditions. Futures and forward contracts, like other derivatives, can involve a high degree of risk and may result in unlimited losses. Because they depend on the performance of an underlying asset, they can be highly volatile and are subject to market, credit, and counterparty risks. Short exposures using derivatives may present various risks. If the value of the asset, asset class or index on which the Fund holds short investment exposure increases, the Fund will incur a loss. The potential risk of loss from a short exposure is theoretically unlimited, and there can be no assurance that securities necessary to cover a short position will be available for purchase. Concentrated investments in a particular region, sector, or industry may be more vulnerable to adverse changes in that industry or the market as a whole.

5 S&P 500® Index is a widely recognized measure of U.S. stock market performance. It is an unmanaged index of 500 common stocks chosen for market size, liquidity, and industry group representation, among other factors. It also measures the performance of the large cap segment of the US equities market. 6 The Barclay Equity Long/Short Index is comprised of equity-oriented hedge funds which hold both long and short stock positions and tend to tactically vary their net market exposure, i.e., market beta, based on their assessment of market risk and expected return. Index returns are recalculated by Barclay Hedge Ltd. throughout each month. The fund does not expect to update the index returns provided if subsequent recalculations cause such returns to change. In addition, because of these recalculations, the Barclay Equity Long/Short Index returns reported by the fund may differ from the index returns for the same period published by others. You may not invest directly in an index. 7 The Advisor will target 75% equity exposure when it believes risk of loss is justified by potential returns; however, the portfolio may exceed that target temporarily due to changes in market pricing or cash flows. 8 Beta is calculated for the three-year period and represents the risk associated with the fund relative to market risks. For example, the market has a beta of 1.00, so if a fund has a beta of 0.85, it can be expected to be 15% less volatile than the overall market. Conversely, if a fund has a beta of 1.08, it can be expected to be 8% more volatile than the overall market. 9 R-squared is calculated for the three-year period and represents the percentage of the fund's movements that can be explained by the movements of the market. For example, index funds will tend to have R-squared values very close to 100. 10 Standard deviation measures the risk of a portfolio or market. Beta, R-squared and standard deviation are calculated on a monthly basis for the three-year annualized period as of the most recent quarter-end. 11 The portfolio is actively managed and holdings are subject to change. References to specific securities or industries should not be considered a recommendation. For current holdings, please visit our website. 12 Assets under management ("AUM"), as reported, may include notional assets, assets serviced, gross assets and other types of non-regulatory AUM. 13 CFA® and Chartered Financial Analyst® are registered trademarks owned by the CFA Institute.

Before investing, consider the fund's investment objectives, risks, charges, and expenses. Visit im.natixis.com or call 800-225-5478 for a prospectus or a summary prospectus containing this and other information. Read it carefully.
