BENCHMARK

Russell 2500™ Growth Index

HIGHLIGHTS

- Our goal is a lower volatility approach to high growth investing
- Active stock selection primarily drives returns by focusing on what we define as high quality “emerging winners” that may benefit from secular growth stories
- Bottom-up portfolio construction is based on fundamental research and discounted cash flow valuation analysis
- Idea generation includes an internally developed growth screen
- Risk management approach integrated throughout the process, including a clear stop/loss discipline to help manage downside risk
- Turnover has historically been approximately 50%; typically 65 to 85 stocks; position size: typically 0.75% to 3%
- Sector weightings limited to +/- 50% of sectors greater than 10% of benchmark allocation
- Stock selection focuses primarily on companies with a market capitalization between \$1.0 to \$8.0 billion (at purchase)
- IPOs and early-stage (non-profitable) companies are limited to 10% of the portfolio

OBJECTIVE

Seeks long-term capital growth from investments in common stocks or other equity securities

The Russell 2500™ Growth Index measures the performance of the small to mid-cap growth segment of the US equity universe. It includes those Russell 2500 companies with higher growth earning potential as defined by Russell's leading style methodology. The Russell 2500 Growth Index is constructed to provide a comprehensive and unbiased barometer of the small to mid-cap growth market. The Index is completely reconstituted annually to ensure larger stocks do not distort the performance and characteristics of the true small to mid-cap opportunity set and that the represented companies continue

MARKET CAPITALIZATION (%)	Fund Index	
	> \$5 Billion	57.0
\$2 to 5 Billion	34.8	31.1
\$0.5 to 2 Billion	4.7	17.4
< \$0.5 Billion	-	2.6
Cash	3.4	-

Portfolio composition statistics are from the adviser's internal system and may not match the fund's regulatory documents. Due to rounding, **Market Capitalization** and **Sector Distribution** totals may not equal 100%. This portfolio is actively managed and characteristics are subject to change. **Top 10 Holdings** may combine more than one security from the same issuer and related depositary receipts. Portfolio weight calculations include accrued interest. Holdings are based on total gross assets before any fees are paid; any cash held is included. Reference to specific securities or holdings should not be considered recommendations for action by investors. There is no guarantee the fund continues to invest in the securities referenced. **Cash** may include unsettled trades, fees and/or derivatives.

P/E (forward) measures price-to-earnings ratio using forecasted earnings for the price-to-earnings calculation; the forward measure is not a forecast of the fund's performance. **P/E (trailing)** is the sum of a company's price-to-earnings, calculated by dividing current stock price by trailing earnings per share for the past 12 months. **3-5 Year EPS Growth** is sourced from FactSet and based on long-term EPS growth rate estimates gathered directly from brokers. The portfolio and benchmark statistic is a weighted average of company level estimates. **3-yr Historical EPS** is the average earnings per share value that the company reports quarterly over the trailing 3-year term, calculated by dividing earnings available to shareholders by total number of shares outstanding. **5-yr Historical EPS** is the average earnings per share value that the company reports quarterly over the trailing 5-year term, calculated by dividing earnings available to shareholders by total number of shares outstanding. **Return on Equity (ROE)** measures a company's profitability and reveals how much profit a company generates with money shareholders invested. ROE is calculated by dividing net income by shareholder equity. **ROE (1-year equal wtd)** is the 1-year ROE of all holdings divided by number of holdings. **Price/Cash Flow** compares the price of a company's stock relative to how much cash flow the firm is generating, calculated by dividing the current market price of the share by the cash flow per share. **Price/Book** is a ratio that compares a stock's market value to its book value calculated by dividing current closing price of the stock by the latest quarter's book value per share. **Debt-to-capital** provides a measure of how much debt the company has on its books calculated by total company debt divided by total capitalization of the company. **Median Market Cap** is the midpoint of market capitalization (market price multiplied by number of shares outstanding) of stocks in a portfolio. **Active share** indicates the proportion of the portfolio's holdings (by market value) that are different than the benchmark. A higher active share indicates a larger difference between the benchmark and the portfolio.
