Russell Midcap® Value Index³	-	-	-	-	-	-	-	-	-	16.70

Investment Process

Performance data shown represents past performance and is no guarantee of, and not necessarily indicative of, future results. Total return and value will vary, and you may have a gain or loss when shares are sold. Current performance may be lower or higher than quoted. For most recent month-end performance, visit im.natixis.com.

You may not invest directly in an index.

†Performance for periods less than one year is cumulative, not annualized. Returns reflect changes in share price and reinvestment of dividends and capital gains, if any. Market returns are based on the midpoint of the bid/ask spread at 4 p.m. ET and do not represent the returns an investor would receive if shares were traded at other times.

¹ The calendar year performance shown for 2020 is a partial year of performance since inception on 09/16/2020 through 12/31/2020. As of the most recent prospectus, the investment advisor has contractually agreed to waive fees and/or reimburse expenses (with certain exceptions) once the expense limitation of the fund has been exceeded. This arrangement is set to expire on 04/30/2023. When an expense limitation has not been exceeded, the gross and net expense ratios and/or yields may be the same.

These ETFs are different from traditional ETFs. Traditional ETFs tell the public what assets they hold each day. These ETFs will not. This may create additional risks for your investment. For example: • You may have to pay more money to trade these ETFs' shares. These ETFs will provide less information to traders, who tend to charge more for trades when they have less information. • The price you pay to buy ETF shares on an exchange may not match the value of the ETF's portfolio. The same is true when you sell shares. These price differences may be greater for these ETFs compared to other ETFs because they provide less information to traders. • These additional risks may be even greater in bad or uncertain market conditions. • These ETFs will publish on their websites each day a Proxy Portfolio ("Proxy Portfolio") designed to help trading in shares of the ETFs. While the Proxy Portfolio includes some of these ETFs' holdings, it is not the ETFs' Actual Portfolio ("Actual Portfolio"). The differences between these ETFs and other ETFs may also have advantages. By keeping certain information about the ETFs secret, these ETFs may face less risk that other traders can predict or copy its investment strategy. This may improve the ETFs' performance. If other traders are able to copy or predict the ETFs' investment strategy, however, this may hurt the ETFs' performance. For additional information regarding the unique attributes and risks of these ETFs, see the discussion on the Proxy Portfolio and the "Proxy Portfolio Structure Risk," "Authorized Participant Concentration Risk," "Predatory Trading Practices Risk," "Premium/Discount Risk," and "Trading Issues Risk" within the prospectus.

Risks

The Fund is new with a limited operating history. Exchange-Traded Funds (ETFs) trade like stocks, are subject to investment risk, and will fluctuate in market value. Unlike mutual funds, ETF shares are not individually redeemable directly with the Fund, and are bought and sold on the secondary market at market price, which may be higher or lower than the ETF's net asset value (NAV). Transactions in shares of ETFs will result in brokerage commissions, which will reduce returns. Unlike typical exchange-traded funds, there are no indexes that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objectives will depend on the effectiveness of the portfolio manager. There is no assurance that the investment process will consistently lead to successful investing. Equity securities are volatile and can decline significantly in response to broad market and economic conditions. Value investing carries the risk that a security can continue to be undervalued by the market for long periods of time.

3 Russell Midcap® Value Index is an unmanaged index that measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Midcap® Index companies with lower price-to-book ratios and lower forecasted growth values. 4 Source: GICS Sectors via FactSet Research Systems Inc. Cash and Unassigned allocations are not included. 5 Active share indicates the proportion of a portfolio's holdings that are different from the benchmark. A higher active share indicates a larger difference between the benchmark and the portfolio. 6 P/E (Trailing) Ratio is the weighted harmonic average of the price-to-earnings (P/E) ratios of all the stocks in the portfolio. P/E ratio is the ratio of a stock's price to its earnings per share for the trailing twelve months. Does not include options. This excludes negative earnings. 7 P/B Ratio is the weighted harmonic average of the price-to-book (P/B) ratios of all the stocks in the portfolio. P/B ratio is the ratio of a stock's price to its book value per share. This excludes negative earnings. 8 Median market cap provides a measure of the market capitalization value of all the stocks in the portfolio. Market capitalization reflects the total market value of a company, as calculated by multiplying the current share price by the number of outstanding shares. 9 The portfolio is actively managed and holdings are subject to change. References to specific securities or industries should not be considered a recommendation. For current holdings, please visit our website. 10 Assets under management ("AUM"), as reported, may include notional assets, assets serviced, gross assets and other types of non-regulatory AUM. 11 CFA® and Chartered Financial Analyst® are registered trademarks owned by the CFA Institute.

Before investing, consider the fund's investment objectives, risks, charges, and expenses. Visit im.natixis.com or call 800-225-5478 for a prospectus or a summary prospectus containing this and other information. Read it carefully.
