

Vaughan Nelson Mid Cap ETF

High active share strategy targeting alpha through undervalued investments

Portfolio highlights

- A mid-cap focused, concentrated equity strategy benchmarked to the Russell Midcap[®] Value Index² that seeks targeted returns through a disciplined investment process.
- High active share⁴ portfolio, constructed using bottom-up fundamental analysis with security selection acting as the largest source of alpha.⁵
- Utilizes three primary return drivers to generate alpha⁵ throughout the full business cycle.
 - **Undervalued Earnings Growth:** companies with a competitive advantage, stable to improving return on capital and future growth that is not properly reflected in the market price.
 - **Undervalued Assets:** companies priced at a discount to asset value with an identifiable catalyst to close the valuation gap.
 - **Undervalued Dividend Yield:** stocks with a historically high, secure dividend yield (typically 10% or higher) and minimal perceived downside risk.
- Integrates a robust proprietary risk management model with portfolio management to maintain a diversified exposure to risk factors similar to that of the Russell Midcap[®] Value Index.²

Portfolio applications

For investors seeking a high active share, concentrated US equity portfolio in the mid-cap equity universe

Potential alpha generating portfolio, based on bottom-up fundamental analysis and security selection

A portfolio that seeks to source returns from multiple investment categories, allowing for the potential to generate alpha in different market environments

Preference for a portfolio that targets companies seeking better earnings growth, quality of returns and lower earnings variability

Diversification measured by granular factor exposures in addition to industry and sector risk factors

ABOUT THE FUND

Objective

Seeks long-term capital appreciation

¹ CFA[®] and Chartered Financial Analyst[®] are registered trademarks owned by the CFA Institute. ² Russell Midcap[®] Value Index is an unmanaged index that measures the performance of the mid-cap value segment of the U.S. equity universe. It includes those Russell Midcap[®] Index companies with lower price-to-book ratios and lower forecasted growth values. ³ As of the most recent prospectus, the investment advisor has contractually agreed to waive fees and/or reimburse expenses (with certain exceptions) once the expense cap of the fund has been exceeded. This arrangement is set to expire on 4/30/23. When an expense cap has not been exceeded, the gross and net expense ratios and/or yields may be the same. ⁴ Active share indicates the proportion of portfolio's holdings that are different than the benchmark. A higher active share indicates a larger difference between the benchmark and the portfolio. ⁵ Alpha is a measure of the difference between a portfolio's actual returns and its expected performance, given its level of systematic market risk. A positive alpha indicates outperformance and negative alpha indicates underperformance relative to the portfolio's level of systematic risk.

Philosophy, process, and risk management

Vaughan Nelson seeks to take advantage of temporary information and marketplace inefficiencies across the market capitalization range to find opportunities to invest in companies at valuations materially below their long-term intrinsic value.

The investment team does intensive financial analysis with an emphasis on balance sheets and cash flow metrics to determine intrinsic value and mispriced securities. Portfolio construction is driven by bottom-up fundamental analysis, but each investment is considered in the context of the broader macroeconomic environment. All investments are further evaluated for their impact on the portfolio to ensure diversification across a number of risk variables.

Vaughan Nelson believes that sector allocation alone is insufficient in determining a portfolio's diversification and risk profile. Instead, the focus is on factor exposure, which provides a more granular view of a portfolio's positioning and biases. The factor-based risk analysis ensures that the high active share portfolio maintains a factor mosaic similar to the universe against which it competes.

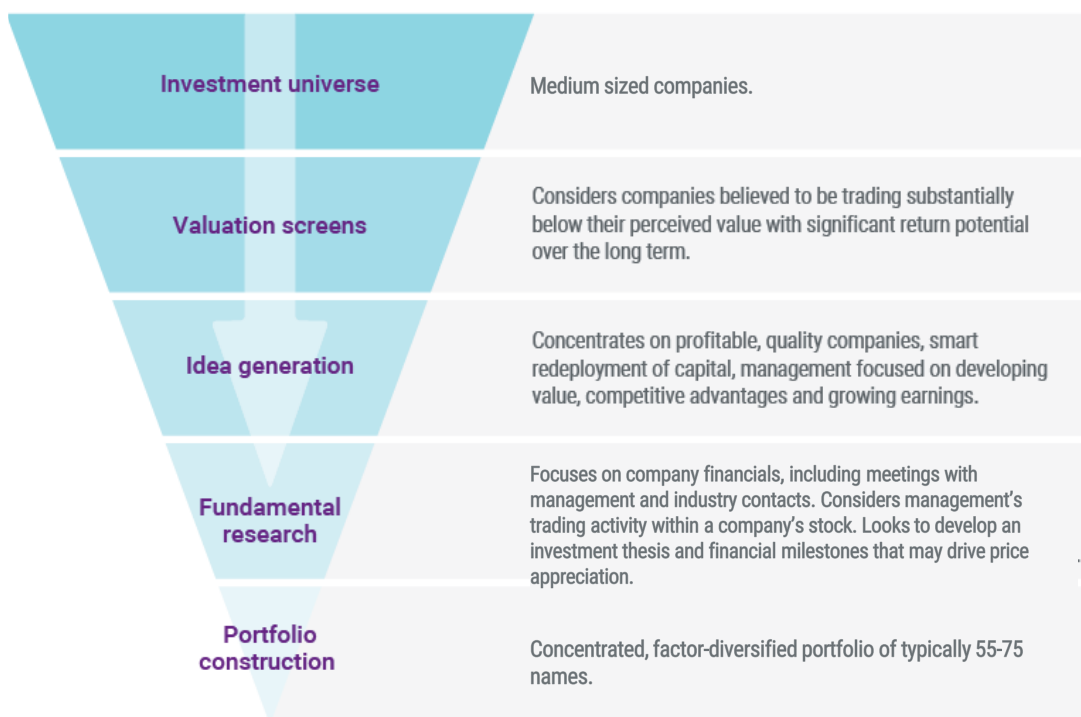

Vaughan Nelson Investment Management specializes in US equities with a focus on targeted return. The firm employs a bottom-up, fundamental research process to capitalize on temporary information and liquidity inefficiencies in equities markets. The firm's long-term, consistent approach draws on in-depth research and consistent process across all market capitalizations.

THIS ETF IS DIFFERENT FROM TRADITIONAL ETFs

Traditional ETFs tell the public what assets they hold each day. This ETF will not. This may create additional risks for your investment. For example:

- You may have to pay more money to trade this ETF's shares. This ETF will provide less information to traders, who tend to charge more for trades when they have less information.
- The price you pay to buy ETF shares on an exchange may not match the value of the ETF's portfolio. The same is true when you sell shares. These price differences may be greater for this ETF compared to other ETFs because they provide less information to traders.
- These additional risks may be even greater in bad or uncertain market conditions.
- This ETF will publish on its website each day a Proxy Portfolio ("Proxy Portfolio") designed to help trading in shares of the ETF. While the Proxy Portfolio includes some of this ETF's holdings, it is not the ETF's Actual Portfolio ("Actual Portfolio").

Disciplined investment process

RISKS: The Fund is new with a limited operating history. **Exchange-Traded Funds (ETFs)** trade like stocks, are subject to investment risk, and will fluctuate in market value. Unlike mutual funds, ETF shares are not individually redeemable directly with the Fund, and are bought and sold on the secondary market at market price, which may be higher or lower than the ETF's net asset value (NAV). Transactions in shares of ETFs will result in brokerage commissions, which will reduce returns. Unlike typical exchange-traded funds, there are no indexes that the Fund attempts to track or replicate. Thus, the ability of the Fund to achieve its objectives will depend on the effectiveness of the portfolio manager. There is no assurance that the investment process will consistently lead to successful investing. **Equity securities** are volatile and can decline significantly in response to broad market and economic conditions. **Value investing** carries the risk that a security can continue to be undervalued by the market for long periods of time.

Before investing, consider the fund's investment objectives, risks, charges, and expenses. Visit im.natixis.com or call 800-225-5478 for a prospectus or a summary prospectus containing this and other information. Read it carefully.
