

Oakmark Select Fund

A high conviction, concentrated, value-driven domestic equity allocation

Portfolio highlights

- Quality and price drive Harris Associates' high conviction, unconstrained investment process in this highly concentrated fund of best ideas (around 20 stocks).
- The team adheres to a strict investment philosophy and process applied to every position they invest in.
- Managed by an experienced investment team, all research is conducted internally and securities are selected from the bottom up, resulting in a portfolio that looks different than the index.
- Positions are weighted based on potential upside and the fund's concentrated portfolio allows every position to contribute meaningfully to returns.
- The portfolio managers follow a strict buy-and-sell discipline that is designed to take advantage of market volatility. Purchases are made based on estimates of intrinsic value. As the gap between business value and stock price narrows, the team sells down the position and moves on to a better opportunity.
- Primarily a large-cap US equity strategy that invests in securities with market capitalizations greater than \$5 billion at time of purchase.

Portfolio applications

A high active share⁴, concentrated domestic equity fund that can be used to generate alpha⁵ within an overall portfolio.

For investors seeking a consistently managed domestic equity fund with a disciplined investment approach that has demonstrated long-term results.

As a potential return-enhancing equity allocation in a risk-budgeted portfolio.

To pursue growth from a concentrated portfolio of US stocks.

As a complement to an index or passive strategy in the space.

ABOUT THE FUND

Objective

Seeks capital appreciation by investing in mid- and large-cap companies based in the US. The Fund is non-diversified, so it will concentrate its assets in fewer individual securities (approximately 20 companies) than a diversified fund.

OAYLX	0.93%	0.86%

¹ CFA® and Chartered Financial Analyst® are registered trademarks owned by the CFA Institute. ² The S&P 500 Index is a widely recognized measure of US stock market performance. It is an unmanaged index of 500 common stocks chosen for market size, liquidity, and industry group representation, among other factors. It also measures the performance of the large cap segment of the US equities market. ³ As of the most recent prospectus, the investment adviser has contractually agreed to waive fees and/or reimburse expenses (with certain exceptions) once the expense cap of the fund has been exceeded. This arrangement is set to expire on 1/27/21. When an expense cap has not been exceeded, the gross and net expense ratios may be the same. ⁴ Active share indicates the proportion of portfolio's holdings that are different than the benchmark. A higher active share indicates a larger difference between the benchmark and the portfolio. ⁵ A measure of the difference between a portfolio's actual returns and its expected performance, given its level of systematic market risk. A positive alpha indicates outperformance and negative alpha indicates underperformance relative to the portfolio's level of systematic risk

Philosophy, process, and risk management

The team focuses on quality companies that they believe offer sustainable, growing free cash flow and rational capital allocation. They aim to purchase companies they believe are priced at a significant discount to their estimate of intrinsic value whose management teams think and act like owners. Portfolio managers build a concentrated portfolio (around 20 stocks) from an approved list of approximately 150 stocks vetted by the Stock Selection Group. The concentrated portfolio allows the best ideas to have a meaningful impact on fund performance.

Harris Associates defines risk as the permanent loss of shareholder capital, so risk measures, such as tracking error and volatility, do not factor into portfolio management decisions. Harris' unconstrained approach means that tracking error will typically be high. Volatility is viewed as an opportunity to purchase stocks that may be currently out of favor and thus trading at attractive prices. Combined with Harris' concentrated position weights, this means that the Fund may at times be significantly more volatile than the market.

Harris believes that purchasing companies they consider to be trading at a discount to their estimate of intrinsic value is an inherently risk-reducing long-term strategy. Through ongoing contact with corporate management teams, the Fund's managers are able to maintain a current target valuation on every company they own.

The process seeks to maximize shareholder returns over the long term.

RISKS: Equity securities are volatile and can decline significantly in response to broad market and economic conditions. **Value investing** carries the risk that a security can continue to be undervalued by the market for long periods of time. **Concentrated investments** in a particular region, sector, or industry may be more vulnerable to adverse changes in that industry or the market as a whole. **Non-diversified funds** invest a greater portion of assets in fewer securities and therefore may be more vulnerable to adverse changes in the market. **Foreign securities** may involve heightened risk due to currency fluctuations. Additionally, they may be subject to greater political, economic, environmental, credit, and information risks. Foreign securities may be subject to higher volatility than US securities, due to varying degrees of regulation and limited liquidity.

Before investing, consider the fund's investment objectives, risks, charges, and expenses. Visit im.natixis.com or call 800-225-5478 for a prospectus or a summary prospectus containing this and other information. Read it carefully.
