## MVIN – Premium/Discount Analysis (Unaudited)

Fund shares are bought and sold on the secondary market at current market prices. Premium/discount represents the difference between the market price (midpoint between the highest bid and lowest offer on the primary listing exchange) and net asset value (“NAV”) of Fund shares determined as of the close of the NYSE.

Premium/discount will fluctuate regularly based on the supply of, and demand for, shares of the Fund. Shareholders may pay more than NAV when they buy Fund shares and receive less than NAV when they sell shares.

The following information presents the frequency of distributions of premiums and discounts for the Funds, as stated in trading days. Trading days are presented by year, starting with the date the Fund began trading on the secondary market. Premium/discount ranges with no trading days are omitted.

The frequency distribution of premiums and discounts, for the Natixis Seeyond International Minimum Volatility ETF, for the period from January 1, 2018 through March 29, 2019 is as follows:
