Performance data shown represents past performance and is no guarantee of, and not necessarily indicative of, future results. The fund's total return percentile rank for the specified time period is relative to all funds that have the same Morningstar category. The highest (or most favorable) percentile rank is 1, and the lowest (or least favorable) percentile rank is 100. Rankings are subject to change monthly. Morningstar rankings do not include the effect of sales charges. ©2019 Morningstar, Inc. All Rights Reserved. For each fund with at least a three-year history, Morningstar calculates a Morningstar Rating™ used to rank the fund against other funds in the same category. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly excess performance, without any adjustments for loads (front-end, deferred, or redemption fees), placing more emphasis on downward variations and rewarding consistent performance. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star (each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages). Overall ratings are derived from a weighted average of the performance figures associated with three-, five-, and ten-year (if applicable) Morningstar metrics.

RISKS: Foreign and emerging market securities may be subject to greater political, economic, environmental, credit, currency, and information risks. Foreign securities may be subject to higher volatility than US securities, due to varying degrees of regulation and limited liquidity. These risks are magnified in emerging markets. **Equity securities** are volatile and can decline significantly in response to broad market and economic conditions. **Currency exchange rates** between the US dollar and foreign currencies may cause the value of the Fund's investments to decline. **Growth stocks** may be more sensitive to market conditions than other equities, as their prices strongly reflect future expectations. **Concentrated investments** in a particular region, sector, or industry may be more vulnerable to adverse changes in that industry or the market as a whole.
